

With Veeam Cloud Connect as a complement to the Veeam Data Platform, you can easily solve these structural challenges. Store your backup in our data center or replicate your virtual machines to our CompanyCloud for fast recovery in an emergency. Select Medialine AG as your certified service provider directly in the Veeam software and pay only for the storage or compute resources you need. Protect yourself against data loss by using our backup repository or setting up our cloud as a failover data center – so you can be up and running again quickly in an emergency.

Veeam Cloud Connect Backup Hosting external backups

Move your backups externally to the Company-Cloud repository via a reliable, secure SSL connection and a Veeam Cloud Gateway without additional licensing requirements.

Complete transparency and control

Access and restore data in the hosted backup repository directly through the backup console. Track usage of the CompanyCloud repository and receive notifications when updates are due for your hosted environment.

Modern backup architecture

Optimize Veeam backup technology with backup copy jobs and integrated WAN acceleration, unlimited incremental backups, GFS retention policies (Grandfather-Father-Son), and much more to comply with the "3-2-1 rule" - all with just one product.

End-to-end encryption

Encrypt your data at the source (before leaving your network environment) without negatively impacting the data compression rate of integrated WAN acceleration.

Integration of hosted backup repositories directly into the Veeam backup console

- Simply click "add service provider" and enter the access details we provide.
- Cloud repositories in the CompanyCloud are displayed in your backup infrastructure.
- VPN or a separate console is not required. Cloud repositories work just like local repositories and are still available even if the primary backup or data center is lost.

Customer Medialine AG

Veeam Cloud Connect Replication

As a supplement to Veeam Cloud Connect Backup, you can replicate your virtual machines directly to CompanyCloud using Veeam Cloud Connect Replication. In the event of a failure of individual virtual machines or entire data centers, you can easily switch to the replicated environment to minimize business interruptions and avoid data loss. Once your systems

are restored, the changed data can be seamlessly transferred back to your primary infrastructure.

Take your cloud replication to the next level and request the perfect solution for your business case from us at sales@medialine.com.

Subject to change and errors. Our general terms and conditions apply in the current version. The product description does not constitute a binding offer and is for informational purposes only. Contractual details can be found in our offers and service catalogs, which we would be happy to create for you.
