Modern Work

Managed CompanyAI Agent

Your sovereign AI platform for the future

Managed CompanyAI Agent offers an expandable and future-proof AI platform for integrating and delivering generative AI technologies across the entire enterprise. This full-stack platform enables companies to effectively leverage and continuously optimize state-of-the-art AI tools.

Core features - Full-stack foundation for future AI tools

Multi-tenant platform: Support for multiple user groups with a single infrastructure

User interface (UI): Easy to use and manage

Evaluation and fine-tuning:
Continuous monitoring and optimization of AI models

Single sign-on & multi-factor authentication: Secure and convenient access
Multimodal data processing: Processing and output of different data formats

Powerful AI models

Latest models:

Includes controlled models from our private cloud, which offer high performance with minimal hallucinations based on our own classified training data

Model diversity:

Option to use individual AI models with our „LLM as a Service“ and connection to GPT-4o, Gemini, and others, depending on your needs and application scenario

Consistency & context accuracy:

Models remain at a defined level of knowledge and context to deliver consistent and reliable results

UI/UX

- **Simple AI portal:** Enables central management of costs, reports, and the selection of suitable AI models for different use cases
- **Scalability:** Platform can be scaled to multiple applications and users, supported by tracking and advanced features
- **File upload:** Enables easy upload of training data to adapt AI models to specific requirements and company guidelines

Security and data protection

- **EU Acts prepared:** Compliance with current European data protection and security regulations to ensure the protection of sensitive data

Easy deployment and maintenance

- **Fast deployment:** The platform can be quickly implemented on a tested and proven infrastructure
- **Continuous updates:** Regular updates and maintenance ensure the continuous improvement and security of the platform

Adaptation to company standards

- **Custom-docked AI models** can be seamlessly adapted to a company's brand voice and security guidelines
- **Integration of AI agents** for AI workflow automation and data/database queries from different systems

Highlight: Our Compliance LLM in CompanyAI Agent

Medialine's CompanyAI Agent integrates a sophisticated compliance guard that reviews prompt requests and enriches them with data from the RAG pipeline or vector database. It ensures that only authorized users can access specific files and checks whether data processing in external LLMs complies with data protection guidelines. In the event of compliance violations, secure, sovereign open-source AI models are used.

Extensibility

- **Model extensions:** Can be extended with any models to meet individual requirements
- **Protection against attacks:** Comprehensive protection against engineering attacks and prompt injections through integrated monitoring and evaluation

Scalability

- **Integrated pipelines:** Easy scalability of the platform through integrated pipelines that reduce manual effort and increase efficiency

New features

- **AI agents:** Create custom AI assistants with customizable names, behaviors, and special abilities without any programming knowledge – similar to OpenAI, but with support for more models.

- **Code interpreter API:** Execute code directly in the chat interface – supports Python, Node.js, Go, C/C++, Java, PHP, Rust, Fortran, and more in a secure sandbox environment.
- **Shared links & snapshots:** Share conversations as immutable snapshots – ideal for collaboration.
- **Technical infrastructure improvements:** MCP support: The Model Context Protocol standardizes how AI models are connected to tools and data.
- **Improved search processing:** Find relevant information in your chat histories faster.
